INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.
PCT/US98/14196

IV	Lack of unity of invention
1.	In response to the invitation to restrict or pay additional fees the applicant has:
	restricted the claims.
	X paid additional fees.
	paid additional fees under protest.
	neither restricted nor paid additional fees.
2.	This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.
3.	This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is
	complied with.
	x not complied with for the following reasons:
	This application contains the following inventions or groups of inventions which are not so linked as to form a single inventive concept under PCT Rule 13.1. In order for all inventions to be searched, the appropriate additional search fees must be paid.
	Group I, claim(s)1-9, 17-39, drawn to a method and apparatus for communicating cells/packets in satellite/wireless communication system. Group II, claim(s) 10-16, drawn to a signal frame format arrangement.
,	The inventions listed as Groups I and II do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP 806.05(c)). In this instant case, the combination as claimed does not require the particulars of the subcombination as claimed and the subcombination has utility by itself such as a data formatting device.
4.	in establishing this report:
	X all parts. the parts relating to claims Nos
	the parts relating to claims 140s

International application No.
PCT/US98/14196

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1.	STATEMENT			
	Novelty (N)	Claims Claims	1-9, 14-39 10-13	YES NO
	Inventive Step (IS)	Claims Claims	1-9, 17-39 10-16	YES NO
	Industrial Applicability (IA)	Claims Claims	1-39 NONE	YES

2. CITATIONS AND EXPLANATIONS

Claims 10-13 lack novelty under PCT Article 33(2) as being anticipated by U.S. Patent No. 5,446,736 to Gleeson et al.. Gleeson et al. discloses a method and appearus for transmitting information in a plurality of cells/packets for a satellite/wireless communication system providing frame assembly/disassembly and header compression/decompression and a cell/packet signal frame arranegement as in claims 10-13 (see col. 6, lines 4-56, col. 13, line 23 to col. 16, line 20, Figures 1, 12A and 14A).

Claims 10-13 lack novelty under PCT Article 33(2) as being anticipated by U.S. Patent No. 5,579,316 to Venters et al.. Venters et al. discloses a cell/packet signal frame arranegement as in claims 10-13 (see col. 4, line 18 to col. 5, line 37, col. 6, line 50 to col. 8, line 54).

Claims 14-16 lack an inventive step under PCT Article 33(3) as being obvious over U.S. Patent No. 5,446,736 to Gleeson et al.. in view of U.S. Patent No. 5,490,141 to Lai et al. or U.S. Patent No. 5,490,140 to Abensour et al.. Gleeson et al. fails to disclose the feature of having cell/packets comprise ATM cells or frame relay packets or Internet packets as in claims 14-16, which are all well known data format and commonly used in communication field for data communication purpose. Lai et al., for example, from the similar field of endeavor, provides the teaching of these well known data format (col. 3, line 52 to col. 5, line 52, col. 8, line 50 to col. 10, line 16) as claimed. Similarly, Abensour et al. also provides the teaching of these well known data format (col. 3, line 14 to col. 5, line 15, col. 7, line 46 to col. 9, line 40) as claimed.

Claims 14-16 lack an inventive step under PCT Article 33(3) as being obvious over U.S. Patent No. 5,579,316 to Venters et al. in view of U.S. Patent No. 5,490,141 to Lai et al. or U.S. Patent No. 5,490,140 to Abensour et al.. Venters et al. also fails to disclose the feature of having cell/packets comprise ATM cells or frame relay packets or Internet packets as in claims 14-16, which are all well known data format and commonly used in (Continued on Supplemental Sheet.)

International application No.
PCT/US98/14196

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: Boxes I - VIII

Sheet 10

I. BASIS OF REPORT:

This report has been drawn on the basis of the description, pages, 1-32, as originally filed. pages, NONE, filed with the demand. and additional amendments:

NONE

This report has been drawn on the basis of the claims, numbers, NONE, as originally filed. numbers, NONE, as amended under Article 19. numbers, NONE, filed with the demand. and additional amendments:

Claims 1-39, filed with the letter of 10 August 1999.

This report has been drawn on the basis of the drawings, sheets, 1-14, as originally filed. sheets, NONE, filed with the demand. and additional amendments:

NONE

V. 2. REASONED STATEMENTS - CITATIONS AND EXPLANATIONS (Continued):

communications field for data communication purpose. Lai et al., for example, from the similar field of endeavor, provides the teaching of these well known data format (col. 3, line 52 to col. 5, line 52, col. 8, line 50 to col. 10, line 16) as claimed. Similarly, Abensour et al. also provides the teaching of these well known data format (col. 3, line 14 to col. 5, line 15, col. 7, line 46 to col. 9, line 40) as claimed.

Claims 1-9, 17-39 meet the criteria set out in PCT Article 33(2)-(4), because the prior art does not teach or fairly suggest a method and apparatus for transmitting information in plural cells/packets using header compression and decompression algorithms in combination with look-up tables that permit rapid correlation and readout of compressed headers and decompressed headers.

International application No. PCT/US98/14196

Bo	x I C	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
Th	is inten	national report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1.		Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2.		Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3.		Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Во	x II (Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
Th	is Inte	mational Searching Authority found multiple inventions in this international application, as follows:
	Ple	ease See Extra Sheet.
1.	X	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2.		As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.		As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4.		No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
R	emark	on Protest The additional search fees were accompanied by the applicant's protest.
1		No protest accompanied the payment of additional search fees.

International application No. PCT/US98/14196

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION WAS LACKING This ISA found multiple inventions as follows:

This application contains the following inventions or groups of inventions which are not so linked as to form a single inventive concept under PCT Rule 13.1. In order for all inventions to be searched, the appropriate additional search fees must be paid.

Group I, claim(s)1-9, 17-39, drawn to a method and apparatus for communicating cells/packets in satellite/wireless communication system.

Group II, claim(s) 10-16, drawn to a signal frame format arrangement.

The inventions listed as Groups I and II do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Groups I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP 806.05(c)). In this instant case, the combination as claimed does not require the particulars of the subcombination as claimed and the subcombination has utility by itself such as a data formatting device.

5

10

20

What is claimed is:

- 1. A communication system for efficiently transmitting information signals in discrete cell/packets, said system comprising at least two local area networks that are connected by a wireless communication link, each local area network comprising:
- (a) a switch for providing a plurality of cell/packets, each cell/packet comprising a header and a payload;
- (b) an interface for connecting said switch to said wireless communication link, said interface comprising:
 - (i) means for discriminating each cell/packet in said plurality of cell/packets;
 - (ii) means for detecting a header in each of said cell/packets and for separating said header from payload;
 - (iii) means for compressing said separated header; and
 - (iv) means for combining said compressed header with said payload to form compressed header cells;
- (c) a frame assembler for assembling said compressed header cells into a frame; and
 - (d) means for transmitting said assembled frame:
- 2. A communication system as set forth in claim 1 further comprising encoding means for encoding said assembled frame.
- 3. A communication system as set forth in claim 1 further comprising an interleaver for interleaving a plurality of said assembled frames.
- 4. A communication system as set forth in claim 1 further comprising an interface to the wireless communication link.
 - 5. A communication system as set forth in claim 1 further comprising:
- (e) means for receiving said transmitted frames from said wireless communication link; and
- (f) a frame disassembler for disassembling said frames into a plurality of compressed header cell/packets.

WO 99/04522

- 6. A communication system as set forth in claim 5, wherein said interface further comprises:
 - (v) means for discriminating each compressed header cell in said plurality of compressed header cells;
 - (vi) means for detecting a header in each of said compressed header cells and for separating said header from payload;
 - (vii) means for decompressing said separated header; and
 - (viii) means for combining said decompressed header with said payload to form cell/packets.

10

5

- 7. A communication system as set forth in claim 5, wherein said cell/packets comprise ATM cells.
- 8. A communication system as set forth in claim 5, wherein said cell/packets comprise frame relay packets.
- 9. A communication system as set forth in claim 5, wherein said cell/packets comprise Internet packets.
- 10. An arrangement of signals in a cell/packet frame with compressed header comprising:
- a first number of bytes representing an original header portion comprising a second number of bytes, said first number being less than than said second number; and a payload portion.
- 11. The arrangement of signals in a cell/packet frame as set forth in claim 10 wherein said compressed header is a predetermined size for all cell/packets.

5

10

- 12. The arrangement of signals in a cell/packet frame as set forth in claim 10 wherein said first number comprises two octets and said second number comprises four octets.
- 13. The arrangement of signals in a cell/packet frame as set forth in claim 10 wherein said first number comprises at least one octet and said second number comprises at least two octets.
- 14. The arrangement of signals in a cell/packet frame as set forth in claim 10 wherein said cell/packets comprise ATM cells.
- 15. The arrangement of signals in a cell/packet frame as set forth in claim 10 wherein said cell/packets comprise frame relay packets. and Internet packets.
- 16. The arrangement of signals in a cell/packet frame as set forth in claim 10 wherein said cell/packets comprise Internet packets.
- 17. An apparatus for a satellite/wireless communication system for transmitting information in a plurality of cell/packets, said apparatus comprising:
 - (i) means for discriminating each cell/packet in said plurality of cell/packets;
 - (ii) means for detecting a header in each of said cell/packets and for separating said header from payload;
 - (iii) means for compressing said separated header; and
 - (iv) means for combining said compressed header with said payload to form compressed header cell/packets;
 - (v) means for discriminating each compressed header cell/packet in said plurality of compressed header cell/packets;
 - (vi) means for detecting a header in each of said compressed header cell/packets and for separating said header from payload;
 - (vii) means for decompressing said separated header; and
- (viii) means for combining said decompressed header with said payload to form cell/packets.

WO 99/04522 PCT/US98/14196

18. An apparatus for a satellite/wireless communication system as set forth in claim 17, wherein said means for compressing and said means for decompressing comprises means for correlating original header and transmitted compressed header information.

5

19. An apparatus for a satellite/wireless communication system as set forth in claim 18, said apparatus further comprising means for transmitting from a transmitting location, comprising means (i)-(iv) to a receiving location comprising means (v)-(viii) information for correlating original header and transmitted header information.

5

- 20. A communication system as set forth in claim 17, wherein said cell/packets comprise ATM cells.
- 21. A communication system as set forth in claim 17, wherein said cell/packets comprise frame relay packets.
- 22. A communication system as set forth in claim 17, wherein said cell/packets comprise at least one of ATM cells and frame relay packets.
- 23. An apparatus for an frame relay wireless communication system, said apparatus comprising:
 - (i) means for generating a one or more Spackets for each frame relay packet cell used for conveying payload information;

5

- (ii) means for detecting a header in each of said Spackets and for separating said header from payload;
 - (iii) means for compressing said separated header; and
- (iv) means for combining said compressed header with said payload to form compressed header cells;

- (v) means for discriminating each compressed header cell in said plurality of compressed header cells;
- (vi) means for detecting a header in each of said compressed header cells and for separating said header from payload;

- (vii) means for decompressing said separated header; and
- (viii) means for combining said decompressed header with said payload to form Spackets.
 - 24. An apparatus for a frame relay wireless communication system as set forth in claim 23, wherein said means for compressing and said means for decompressing comprises means for correlating original header and transmitted compressed header information.

5

5

5

10

- 25. An apparatus for a frame relay wireless communication system as set forth in claim 23, said apparatus further comprising means for transmitting from a transmitting location, comprising means (i)-(iv) to a receiving location comprising means (v)-(viii) information for correlating original header and transmitted header information.
- 26. An apparatus for a frame relay wireless communication system as set forth in claim 23, further comprising means for assembling a plurality of Spackets into a frame relay packet.
- 27. A method of communicating cell/packets, each comprising a header portion and a payload portion, in a modified frame format comprising:
- (a) separating said header portion and said payload portion for each cell/packet:
 - (b) identifying N of M header octets in said header;
 - (c) compressing said N header octets into L octets;
 - (d) combining said L octets with said payload portion;
 - (e) transmitting said combined L octets and payload portion within a frame:
 - (f) receiving said frame;
 - (g) separating said L octets from said payload;
 - (h) decompressing said L octets into N header octets;
 - (i) generating M header octets from said N header octets; and
- (j) combining said M header octets with said payload portion to create a cell/packet.

28. The method of claim 27 wherein said compressing step further comprises:

comparing said N header octets to the content of a header compression table containing index values.

- 29. The method of claim 27 wherein said comparing step comprises at least one of hashing and table look-up techniques.
- 30. The method of claim 27 wherein said decompressing step further comprises:

comparing said L octets to the content of a header decompression table containing N header octets.

- 31. The method of claim 30 wherein said comparing step comprises at least one of hashing and table look-up techniques.
- 32. The method of claim 24 wherein said header comprises a HEC-based header.
- 33. The method of claim 27 wherein said header decompression table has H-1 entries, wherein H = 2n, wherein $n \le 16$.
- 34. The method as recited in claim 27 wherein said transmission step further comprises generating an input entry for a compression table and generating an entry for a decompression table and transmitting said decompression table entry for input into said decompression table.

- 35. The method as recited in claim 34 wherein said entry is transmitted in a cell.
- 36. The method as recited in claim 35 wherein said entry is created and sent ahead of a user cell.

WO 99/04522

5

10

15

5

37. An apparatus for an Internet satellite/wireless communication system, said apparatus comprising:

(i) a generator for generating a one or more Internet cell/packets for conveying payload information;

PCT/US98/14196

- (ii) a header detector operable to detect a header in each of said packets and for separating said header from payload;
 - (iii) a compressor for compressing said separated header; and
- (iv) a combining unit for combining said compressed header with said payload to form compressed header cell/packets;
- (v) a discriminator for discriminating each compressed header cell in said plurality of compressed header cell/packets;
- (vi) a header detector for detecting a header in each of said compressed header cell/packets and for separating said header from payload;
 - (vii) a decompressor for decompressing said separated header; and
- (viii) a combining unit for combining said decompressed header with said payload to form packets.
- 38. An apparatus for a frame relay wireless communication system as set forth in claim 37, wherein said compressor and said decompressor comprises means for correlating original header and transmitted compressed header information.
- 39. An apparatus for a frame relay wireless communication system as set forth in claim 37, said apparatus further comprising means for transmitting from a transmitting location, comprising apparatus (i)-(iv) to a receiving location comprising apparatus (v)-(viii) information for correlating original header and transmitted header information.
